Aquatech User Guide

Virtual aquarium • 1.8" AMOLED touchscreen • the game runs in real time

1 The aquarium

① **Tap the top of the screen**: drops a dose of food (5 flakes, €0.05).
② **Tap a fish**: opens its card. Tap a decoration: offers to sell it.
③ Round button: **menu**. ④ Shop icon: **shop**.
⑤ **Swipe a finger** across the screen: the sponge wipes off algae.

2 The shop

①② **Tabs**: fish (2 pages) or decorations. ③ Your balance.
④ **Tap a fish** to buy it: it appears in the aquarium (greyed price = too expensive).
⑤ Arrows: next / previous page. ⑥ Red cross: close.
Decoration: tap “Buy”, drag it into place, confirm with OK.

3 A fish's card

① **Age** (heart) against its lifespan. ② **Hunger**: green = full, red = starving.
③ Current **resale value**. ④ **“Sell”** (asks to confirm); “Remove” for a skeleton.
⑤ Previous / next fish. ⑥ Red cross: back.

4 The menu

① **“New”**: starts over (asks to confirm). ② **“Save”**: manual save.
③ **Speaker**: sound on / off. ④ **Flag**: **language**, FR → EN → ES in a loop.
⑤ **Battery**: % and voltage; yellow outline while charging. ⑥ **Brightness** slider. ⑦ Red cross: back.

Main game mechanics

Economy

Start: **€10.00**. Income: **+€2.00 per day**, paid during sleep or power-off too (elapsed time is caught up at power-on).
One dose of food: €0.05.
Decorations: Chest and Helmet €6 • Plant €9 • Coral €12 • Rock €21 • Rocks €45 • Full set €60.
Selling a fish: **80 %** of its new price, falling daily to 0 at end of life. Limits: 20 fish, 12 decorations.

The fish

Fish	Price	Life
Neon	€1.00	20 d
Guppy	€1.50	14 d
Black molly ●	€2.50	24 d
Clown	€3.00	34 d
Corydoras	€3.50	40 d
Loach	€4.00	44 d
Betta	€5.00	30 d
Blue tang ●	€7.00	50 d
Oscar	€8.00	56 d
Discus	€9.00	60 d

● = grazes on algae. Life = maximum lifespan, in days.

Hunger and life

Young fish (first 15 % of their life) are shown at half size.
Hunger climbs to its maximum in **3 days**. From 30 % a fish dashes for the nearest flake; each flake eaten feeds it.
Uneaten flakes stay on the bottom for 12 h, then vanish.
After **36 h** at maximum hunger a fish starves. It also dies of old age at the end of its lifespan. It turns into a **skeleton** to remove from its card.

Algae

A green film builds up gradually (about 17 new patches a day) and spreads outward from its edges.
By hand: **swipe a finger** to wipe it off.
The **Black molly** and the **Blue tang** graze on it as they swim: two clean nearly everything, one leaves some. Grazing feeds them slightly.
A heavily overgrown tank looks bad, but only hunger (or age) kills a fish.

Power and saving: **PWR** button — short press = sleep / wake, long press = full power-off. The game saves itself every 5 minutes and after every purchase or sale; sound, brightness and language are remembered. The board's clock keeps time, so fish, hunger and algae keep evolving while off.
